EDUCATION

Carnegie Mellon University, School of Computer Science

Master of Software Engineering

Pittsburgh, PA

Aug 2021 – Dec 2022

China University of Mining and Technology, Beijing, School of Science

Bachelor of Science in Information and Computing Science

Beijing, China

Sept 2013 – June 2017

Peking University, National School of Development

Bachelor of Economics (double major)

Beijing, China

Sept 2014 – July 2017

PROFESSIONAL EXPERIENCE

App Annie

Senior Backend Software Engineer & Scrum Master

Beijing, China

Feb 2018 – July 2021

• Connect Backend Services

- Refactored and migrated connection workflows of 30+ platforms to microservices with a scalable solution to complete 2FA, which significantly reduced time cost and improved success rate by 30%. Enhanced monitoring and troubleshooting tools.
- Migrated legacy data service from monolithic Django application to 7 Python and Go container-based microservices. Implemented unified query language translation, data aggregation and data permission control.
- Led many other projects including alert improvement, proxy management, Python 2to3 upgrade, from requirement analysis and technical design to deliverable and day-to-day maintenance.

• First-Party Data Platform Backend Tasks

- Maintained scraping tasks and promptly reacted to platform changes. Developed internal tools for troubleshooting and enhanced monitoring to quickly locate issues.
- Upgraded internal Node.js scraping framework by integrating puppeteer to support headless browser-based scraping tasks and supported Google Firebase integration by implementing browser-based scraping task and ETL task.

• Front-end Development

- Learned React from scratch and built App Annie Connect Source Analysis Report.
- Built *App Annie Ascend* UI including data visualizations, connection management, and user management using React.

• Scrum & Agile Project Management

- Led a Scrum team of 6+ and facilitate the team's progress toward goals by coordinating with external teams in different time zones, and hosting sprint planning meetings, daily Scrum meetings to manage projects, and retrospectives to help the team locate issues.

• Best Engineering Excellence Award in App Annie Hackathon

- Built *App Annie Distributed Configuration Management System* which allows engineers to easily manage the configurations of Flask-based backend services on various environments with user-friendly UI.

VIPKID

Backend Software Engineer

Beijing, China

July 2017 - Feb 2018

- Built backend services and asynchronous task system for VIPKID Dino English App and its WeChat platform.
- Developed resource management and course booking management using Sprint Boot for VIPKID School.

Backend Software Engineer Intern

Aug 2016 - July 2017

- Supported parents booking courses, students downloading learning materials for mobile applications using gRPC.
- Built an internal ticket system to help send requests for application change, database change, testing.

ADDITIONAL PROJECTS

Distributed Bitcoin Miner

Sept 2021 - Oct 2021

Built a TCP-like Live Sequence Protocol (LSP) on top of UDP (*net* package of *Go*) with capabilities of handling lost, duplicated, or corrupted Internet packets, as well as failing clients and servers; implemented bitcoin miner, client, and server with failure handling and round-robin load balancing on top of the LSP.

Raft Consensus

Nov 2021

Implemented Raft Consensus Algorithm with leader election and log replication in *Go* based on *In Search of an Understandable Consensus Algorithm*.

Peking University Course Trading Market

Dec 2016 - Feb 2018

Developed a third-party information exchange platform with both website and WeChat Mini-Program, which facilitated course swapping among students at National School of Development at Peking University.

SKILLS

Programming Languages: Python, JavaScript, Go, Java, SQL

Data Storage: MySQL, PostgreSQL, MongoDB, Redis, Amazon S3

Frameworks: Flask, Django, React

DevOps: Docker, Sentry, Kibana, New Relic, Datadog
